George-Raafat

Back-end Software Engineer

Summary

Software Engineer with experience developing production ERP systems and scalable backend applications. Skilled in REST APIs, database design, Docker, and collaborative development.

Education

Cairo University — **Faculty of Computers & Artificial Intelligence**
B.Sc. in Computer Science - GPA: 3.8/4.0 — *10/2022 – 06/2026*

Experience

AppyInnovate — **Remote**
Software Engineer (ERPNext Developer & DevOps) — *04/2026 – Present*

- Owned the development, maintenance, and deployment of ERPNext/Frappe-based ERP systems.
- Extended and stabilized an existing ERPNext codebase by implementing business features, custom modules, and Phase 2 ZATCA e-invoicing improvements.
- Designed a centralized authentication portal and configurable white-labeling system, improving maintainability across ERP deployments.
- Designed Docker-based deployment environments, configured Nginx on VPS servers, and automated deployments using GitHub Actions and SSH.

Banque Misr — **Hybrid**
Back-end Development Intern — *07/2025 – 08/2025*

- Developed secure backend applications using Spring Boot, JWT, MySQL, and MongoDB.
- Implemented automated testing and containerized applications with Docker.

NCI (via ALX Ventures) — **Remote**
Back-end Developer — *09/2024 – 11/2024*

- Built and deployed a scalable API for an inventory management SaaS (Nest.js, MongoDB).
- Implemented multi-tenant database architecture to streamline client data management.

ALX Africa — **Remote**
Software Engineering Intern — *02/2023 – 04/2024*

- Completed a 12-month software engineering program specializing in back-end development.
- Developed full-stack web applications while designing relational and NoSQL databases using modern backend frameworks.
- Applied Linux, Git, agile workflows, and test-driven development in collaborative software projects.

Projects

SmartGallery (Graduation Project) — *10/2025 – 06/2026*

- Led a five-member team developing an AI-powered Android gallery application.
- Designed the MVVM architecture and implemented semantic search and image indexing.
- Converted MobileCLIP2-S0 to ONNX and reduced the text encoder from 224 MB to 61 MB.
- Enabled fully offline semantic, face, and OCR search, indexing 1,000 images in approximately 15 minutes.

Learning Management System — *12/2024 – 12/2024*

- Built a web platform for managing courses and assessments (Spring Boot, PostgreSQL).
- Designed normalized schemas and integrated Cloudinary for media management.

Doodles — *03/2024 – 04/2024*

- Developed drawing-sharing web app (Next.js, React, Prisma, MongoDB, NextAuth).
- Implemented authentication, database optimization, and image storage with Cloudinary.

Skills

Programming Languages: Java, Kotlin, Python, JavaScript/TypeScript, C, C++, HTML, CSS

Frameworks: Spring Boot, Frappe, Flask, Django, Nest.js, Next.js, Jetpack Compose

Databases: MySQL, PostgreSQL, SQLite, SQL Server, MongoDB

Tools & Technologies: Git, Docker, Linux, Nginx, Prisma, ONNX Runtime

Soft Skills: Communication, Teamwork, Time Management, Attention to Detail
